Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

m

Anote—"Vector: Bluescript SK(-); Site_1: BcoRI; Site_2: XhoI; Various sizes of sprouting eyes (2mm to 15mm) were taken from tubers. The tubers were incubated at 26C in the dark for 2-3 weeks prior to sprouting. The eyes were frozen in liquid nitrogen immediately upon removal from tubers." ä TITAATAAAAAACCAGAAATAAAACACGTTGAAGGTGATTCTGTTGTGGTTACTTTTGCA 320 380 353 381 TATCCACTTGTACCTTCATTGGGAAATGCAATCAAATTATGTGATTGCGTCACGGTCCCA 440 441 CTTTTTTCACTTCAAGTGACGTTTTTTCCGGGCTCGGGTATATCACTAGGAATGACGAAT 500 81 ATTACTEGGCFACTCTTCCCFCCGGTCCACCATCTTTTCTTCTATGACTTTCCACATTCT 140 CATGITITGGTFAGGGTTCCACCGTATACGGCGGGATATTATTCTACAAGCTCCCCATTTC 128 CATCATAGCCTTGGTGACGCTAGCACGCGGTTCAACTTTTTGAAAGGGTGGACTTCGATT 560 Gaps 21 CGAATATCGGCCCCCTCGGi3CACCATCGGCCATCGCTCGTTATCTTACTTTCTTCGAC 80 Research Genetics, Libraries 9 CAAGTTGCGCCACCTCCGGGCGGCGCGCGGGGGGGCGCACTCCCTCTTACTTTTGAT 242 -----ATATCCTGAGTIACATTATGTGACAGGAGATTCTGTATCTGTTACTTTTTCT 141 AAATCCCATTTCATGGACACTATTGTTCCCAGGCTAAAACAATCTTTATCGGTCACTCTT 321 GAATGTTGTCTTGACTTTAATAATTTGACAGGAAATCATCCTCGAAAATGTGAAAACTTT CAACATTTTTCCCGTTTGCTAGTAATTTGATTGTATTTCCTAACACTGATGGTTCGGGT 189 AAACACTATACGCCCTTAGCTGGAAACGTTGCTCGTCCACTAGATACAAACGG-----561 ATTCAATCTGGTGTAGATCGGTCTTTTTAACGAAAGGATCTCCACCGGTTTTTGATAG Score 130.2; DB 155; Length 690; Pred. Leaf tissue was collected at 1, 2, 5, 12, and 24 hours post-challenge and frozen in liquid nitrogen inmediately upon removal. Kennebec plants showed no signs of HR. Katahdin plants (susceptible to P. infestens US-1) were used as controls and showed infection. NOTE: We cannot exclude the possibility that than sociated.

//dab_host="E.coli strain xLOLR"
//note="Vector: pBluescript SK -; Site_l: EcoRI; Site_2:
Xhoi: JONA was prepared from polyA+ enriched RNA. The cDNA
was directionally ligated into the Unizap XR vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

Leaflets and petioles were isolated from 8 week old greenhouse grown plants. The plants were watered and fertilized freely. The tissue was immediately frozen in light of a proper process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            508 bp mRNA EST 29-JAN-2001 potato leaves and petioles Solanum tuberosum cDNA clone

/dev_stage="effective root nodules harvested one month post inoculation with Sinorhizoblum melilot!"
/lab_host="E. col1 strain xLOLR"
/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
Xhoi; cNNA was prepared from poly4+ enriched RNA from effective root nodules harvested one month post inoculation with Sinorhizoblum meliloti. The cDNA was directionally liqated into the Uni-zAP XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-ZAP phage using Ex-Assist helper phage and propagated in XLOLR cells."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Lycopersicon.

The software programs used to predict genes include: Grall (Informatics Group, Oak Ridge National Laboratory, http://compbio.orml.gov/Grall-1.3/), http://compbio.orml.gov/Grall-1.3/), GENSCAN (Chris Burge, MIT, http://CR-081.mit.edu/GENSCAN.html), GENSCAN (Chris Burge, MIT, http://crompio.orml.gov/Grall-1.3/), Tachnical University of Denmark, http://www.cbs.dtu.dk/services/NetGene2/) and SplicePredictor (Volker Brendel, Stanford University, http://gromlinl.zcol.iastate.edu/cgi-bin/sp.cgi), Gense mocding trRNAs are predicted by trNAscan-SE (Sean Eddy, Washington University, School of Medicine, St. Louis, http://genome.wustl.edu/eddy/tRNAscan-SE/). This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between neighboring submissions. The 5' clone is K15E6 and the 3' clone is K3K3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Direct Submission
Submitted (18-AUG-1998) Yasukazu Nakamura, Kazusa DNA Research
Institute, Department of Plant Gene Research; 1532-3, Yana,
Kisarazu, Chiba 292-0812, Japan (E-mail:ynakamu@kazusa.or.jp,

For the latest information on annotation of this clone, please see
http://www.kazusa.or.jp/KaosoGgi-bin/agd_graph.cgi?c=mxFl2
Genes with similarity to proteins in the databases are described in
'product' or 'note' qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'
protein similarity are described as 'unknown protein'
